"Articulation is not just tonguing, as most wind players define it, but something much broader, and more akin to what we generally think of as phrasing. Articulation is a method of joining musical tones, determining their beginnings and ends and the relationships between individual notes and those around them"

-The Flute book, Nancy Toff

There are a lot of different articulations, such as legato, staccato, or slur. For flute players, perfecting articulation can be hard. The first thing to remember is where to tongue. When tonguing, always place the tongue where the teeth meet the gum. If you are using too much of the tongue, the articulation can be heavy and your sound can become distorted. Some flautists like to say the sound tu when articulating, however 1 prefer du because it gives a softer and less harsh attack. Double-tonguing and triple tonguing are great tools for fast articulation. For double tonguing 1 prefer du-gu-du-gu. These exercises are intended to develop your articulation.

-Rebecca Eggli

Exercise 1

Eggli

With this exercise, the concentration should be on making each articulation even. Make sure the *du* sound and the *gu* sound are clear. Continue the pattern up the scale, one octave. Start with quarter note equals 60, as it becomes easier, gradually increase the tempo. Be sure to practice with a strong forte sound.

*Hu should not have any articulation, just a soft puff of air.

Each week change keys and/or octaves.

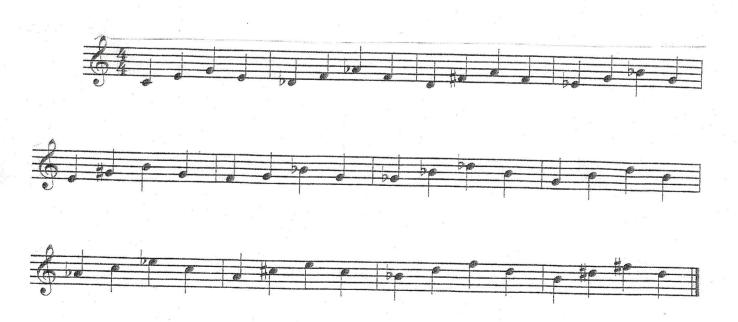

Exercise 2

Eggti

This exercise is used to strengthen articulation in the lower register. Start with quarter note equals 60 and gradually increase speed. Always play with a strong forte sound.

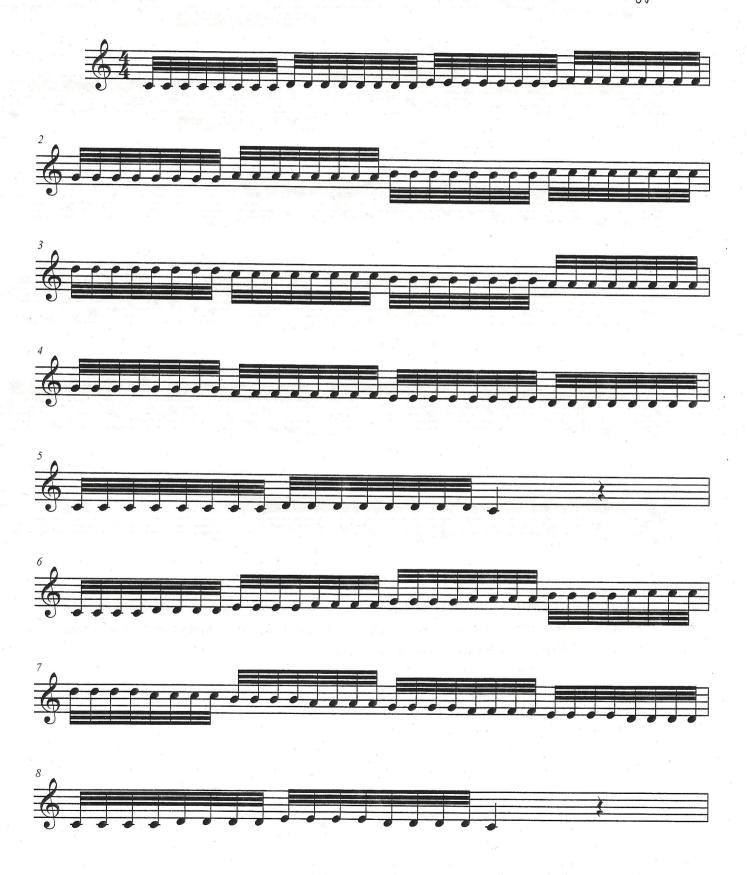

Following these articulations and rhythms, play each of the patterns below.

Exercise 3

Eggli

Start this exercise at quarter note equals 60. Use double-tonguing, but make sure to produce clear sounds. As the exercise becomes easier, increase speed and/or volume. Alternate this pattern between different scales.
